Information about PFAS

Dear Sir or Madam,

thank you for contacting us regarding perfluorinated and polyfluorinated chemicals (PFAS), which are being discussed for their potential effects on human health and the environment. We understand this concern and appreciate the opportunity to further inform you.

Please be assured that di-soric GmbH is closely monitoring the issue to ensure the safety of our products to people and the environment. We consider this an essential part of doing business ethically and legally and an important element in maintaining confidence in our products.

PFAS is a collective term for various classes of chemical substances that can range from benign (no significant bioaccumulation) to persistent bioaccumulative.

Should the restriction proposal become legally binding, we are confident that our suppliers will comply with their information obligations and inform us if PFAS is present in the products supplied to us.

We are currently unable to make any statements on PFAS that go beyond the substances listed in REACH and the POP Regulation.

Lüdenscheid, July 20, 2023

Best regards
